

AIM Software Upgrade - Detailed Overview

System Compatibility

AIM (.net)

- Compatible with the latest Windows system
- Uses modern .NET framework

AIM (VB6)

- Limited to older operating systems (Windows 7)
- Requires outdated components

System Architecture

- Database-driven structure allows faster updates
- No need to rebuild the application for changes
- Reduces downtime during system updates

Key Feature Enhancements

- Leveler Calculator improvements reduce adjustment time
- Faster recipe creation with Recipe Wizard
- Parameter updates can be applied more efficiently

Operator Assistance

- Notes feature provides clear instructions with visual indicators for operators
- Screen color coding reduces user errors

Data & Usability Enhancements

- Advanced filtering in Recipe History
- Easier recipe selection and navigation
- Improved library search functionality

Business Benefits

- Reduced downtime through faster updates
- Increased operator efficiency
- Improved accuracy and fewer errors
- Faster system changes and flexibility
- Future-ready platform for long-term use

Data Management Updates

- Recipes are no longer permanently deleted - only disabled
- Ability to restore previously removed recipes
- Reduces risk of data loss and improves traceability
